Backup Configuration

[Backup Settings \(config\)](#)[Additional Destinations \(destinations\)](#)[Validation Results \(validation\)](#)

Backup Status

☒ **Enable Backups**

Toggle backup activity.

Global Settings

Backup Type

☒ **Compressed**

Save all of your information, use less disk space, but take more time to create a backup.

☐ **Uncompressed**

Save all of your information, use more disk space, but take less time to complete a backup.

☐ **Incremental**

Only save the information that has changed since your last backup.

☒ **Check the Available Disk Space**

If you enable this option and the available disk space is less than the amount that you specified, the system will not run the backup.

 %

Maximum Destination Backup Timeout

Enter the number of seconds during which the destination backup will attempt to run. If the destination backup attempt is not successful during this time, it will time out and stop.

 seconds

Maximum Backup Restoration Timeout

Enter the number of seconds during which the system will attempt to run the backup restoration. If the restoration cannot complete in the specified time, it will cancel.
