Security Questions

Configure Security Policies

This interface provides the configuration settings of the Security Policy that apply to cPanel, cPanel webmail, and WHM on your server.

Security Policy Items

- ☐ Limit logins to verified IP addresses.
- ☐ Two-Factor Authentication: Google Authenticator
- ☐ Password Strength
- ☐ Password Age

Security Policy Extensions

In addition to cPanel, cPanel webmail, and WHM interfaces, enable Security Policies for the following request types:

- ☐ API requests
- ☐ DNS Cluster Requests

Warning: When you enable the Security Policy Extensions for the remote APIs and DNS cluster requests, incompatibilities will become difficult to diagnose. We recommend you do not enable these extensions unless you have an in-depth understanding of your remote API usage and DNS cluster configuration.

You may need to reset your password or provide other information immediately after you click Save.
