## Edit System Mail Preferences

### Notes:

- Usually, the system sends emails about problems on the server and normal server activity to “root.”
- If you do not use suexec, the “nobody” user receives bounce messages from email that CGI scripts send.

The system currently forwards mail for **“cpanel”** to “wingpath”.

#### Forward mail for “cpanel” to:

To forward email to one or more users on the server, or email addresses, enter them in a comma-separated list.

The system currently forwards mail for **“nobody”** to “wingpath”.

#### Forward mail for “nobody” to:

To forward email to one or more users on the server, or email addresses, enter them in a comma-separated list.

The system currently forwards mail for **“root”** to “wingpath”.

#### Forward mail for “root” to:

To forward email to one or more users on the server, or email addresses, enter them in a comma-separated list.
