FTP Server Selection

This feature lets you choose your FTP server software, or disable FTP for your server.

FTP Server	Advantages	Disadvantages	Notes
☐ ProFTPD	- Allows use of ".ftppass" files for per-directory access controls. - Supports TCPWrappers based access controls. - Highly configurable.	- Uses more memory. - Login notifications are not available. - Brute force protection is not available.	This is recommended only if you require additional configuration flexibility.
☐ Pure-FTPd	- Faster login time. - Uses less memory. - Better security model. - Allows virtual user quotas. - Better compatibility with software RAID systems. - Support for brute force protection.		- Default on cPanel systems. - Ideal for memory-constrained systems. - Does not support TLS 1.0.
☒ Disabled			This option will disable the local FTP server.
