Server Profile

You can use this interface to select a server's profile, based on the services that you want the server to provide. This allows you to enable or disable specific services to reduce the resource load of a server.

Select Profile

The following profiles are available for this server:

☒ **Standard Node** ★

The Standard Node profile provides all services and access to every cPanel feature. ⓘ

☐ **DNS Node**

The DNS Node profile provides only services and cPanel features that allow the system to serve Domain Name System zones. ⓘ

☐ **Database Node** **Experimental**

The Database Node profile provides only services and cPanel features that allow the system to serve databases. ⓘ

☐ **Mail Node** **Experimental**

The Mail Node profile provides only services and cPanel features that allow the system to serve mail. ⓘ

[Continue](#)

★ Current Profile

Experimental Experimental profiles contain previews of new functionality. We do not recommend that you use experimental profiles on production environments.
