Networking Setup

## Traceroute Enable/Disable

Traceroute displays the packet routing statistics from the server to another network host. It can be used to map the network's topology and subsequently be used as a tool to focus a hacking attack.

### Traceroute Status

Traceroute is currently enabled.

| Binary          | Permissions |
|-----------------|-------------|
| /bin/traceroute | 755         |

[Disable](#)
