Update Preferences

You can use this interface to choose when and how the system updates your server. For more information, read our documentation about release tiers and updates (https://go.cpanel.net/versionformat).

About Development Releases: Odd-numbered builds are development builds. **Don't** install them in a production environment. They change often and we may not have fully tested or documented them yet.

cPanel & WHM Updates

Update Delivery Network: httpupdate.cpanel.net

Installed Version: 84.0.21

Current Tier: RELEASE

Release Tier

Select the release tier to use for updating cPanel & WHM. You **can't** downgrade or select tiers that are older than the currently installed version.

Tier	Currently	Description
<input type="radio"/> LTS (LONG-TERM SUPPORT)	78.0.46	 A well-tested and proven version that cPanel, L.L.C. supports for one full year.
<input type="radio"/> STABLE	84.0.21	A version that is feature-complete, fully tested, and is in widespread use.
<input checked="" type="radio"/> RELEASE <div>Recommended</div>	86.0.4	A version that is feature-complete and well tested.
<input type="radio"/> CURRENT	86.0.4	A "release candidate" version that is tested but may not be feature-complete.
<input type="radio"/> EDGE	86.0.4	A development version for testing only and not for production servers.

Daily Updates

- ☒ Automatic
- ☐ Manual
- ☐ Never

Staging Directory

The staging directory stores update data before the system applies it. Make sure to select a directory with enough disk space.
