Durable outdoor paints that resist mould and yellowing

62

ROUTERS

Power tools for cutting grooves for shelves and much more

*A Kitchen- but not as we know it.
Food processors cut and grind their
way to victory in our latest Best Buy stakes.*

FOOD PROCESSORS p34

Which? researchers are well known for shaking things up. But in our latest test of blenders and food processors, we've made the earth move, too.

Our poor lab staff subjected themselves to four weeks of vibrating offices as they ran appliances to check how long they last. The noise of 51 food processors running simultaneously was so ear-splitting that you could hear it from outside the building.

A hoard of robotic fingers steadily pressed the switches – they turned the models on test on and off up to as many as 750 times.

Meanwhile, our testers put the processors through their paces in up to 15 different food tests. They checked the results of chopping, grinding, grating and blending in the machines.

And all that racket was worth it in the end. The test results show you can improve your kitchen life with our great new Best Buys.
